

Full On-Prem & Air-Gapped | White-Label OEM
30-Minute Deployment | Per-Seat Pricing | Multi-Provider Support

Enterprise-Grade AI Control Without the Complexity

Built for full on-premises deployment and seamless OEM embedding.

30-Minute Deployment

Production-ready across your organisation in a single session, not a multi-week integration project.

Centralised API Key Management

Eliminates distributed key exposure, the most common source of LLM security breaches.

Intelligent Response Caching

Reduces redundant API calls, cutting costs from day one - no application changes required.

Complete Usage Visibility

Every API call logged and attributable, giving you the data to optimise spend across teams and providers.

AI Controller is an intelligent gateway that gives you complete control over how your organisation uses LLMs. One integration point for every provider, every user, and every application; with **full security**, **audit logging**, and **on-premises deployment**.

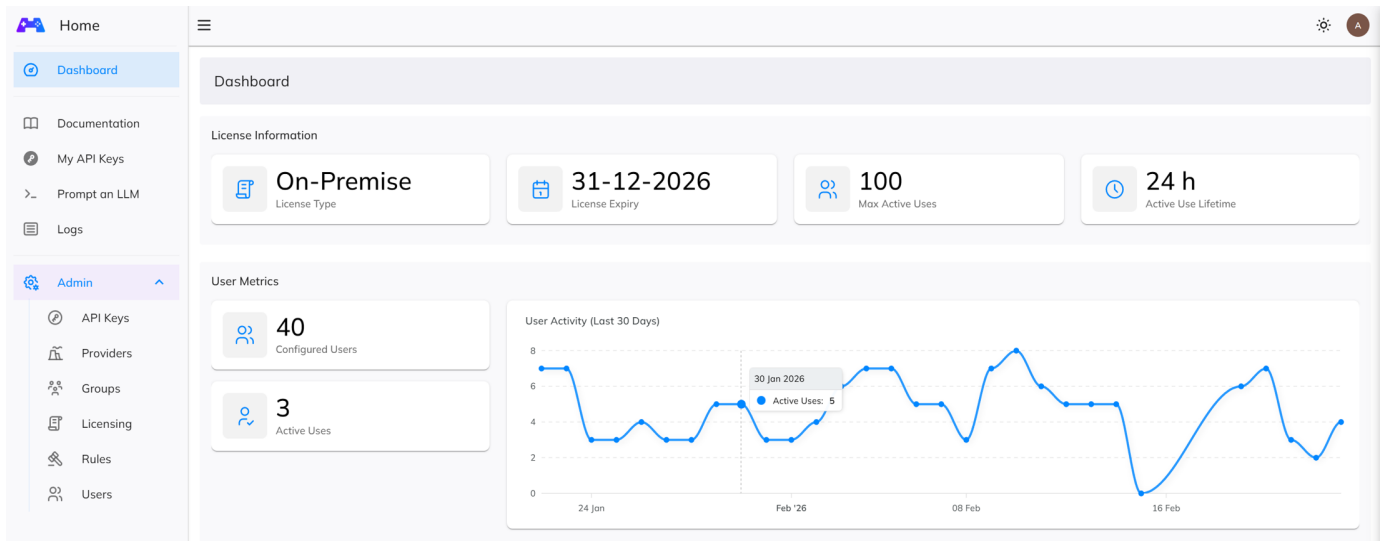

FOR ENTERPRISE LEADERS

Secure AI adoption without losing control

As AI expands across teams and applications, you need **centralised governance**, **cost visibility**, and infrastructure-level **oversight**, without disrupting how your organisation works.

AI Controller provides a single **control layer** across all LLM providers, users, and applications. It unifies **access management**, **logging**, and **deployment** into one secure gateway, giving you full transparency, predictable costs, and enterprise-grade oversight from day one.

A new LLM launches. You update it once in AI Controller. Every user, application, and integration instantly has access with full security and logging maintained. No tickets. No code changes. No rollout plan.

FOR SOFTWARE COMPANIES

White-label AI excellence

Your customers expect AI features. You shouldn't have to build the infrastructure to deliver them.

If you're building any of these, AI Controller handles the AI layer so you can focus on your product:

- ❖ Development environments with AI-assisted coding.
- ❖ Business intelligence platforms with natural language querying.
- ❖ Document management systems with AI-powered analysis.
- ❖ Customer service platforms with intelligent response generation.
- ❖ Any software that needs reliable, multi-provider LLM integration.

Transform AI chaos into controlled innovation

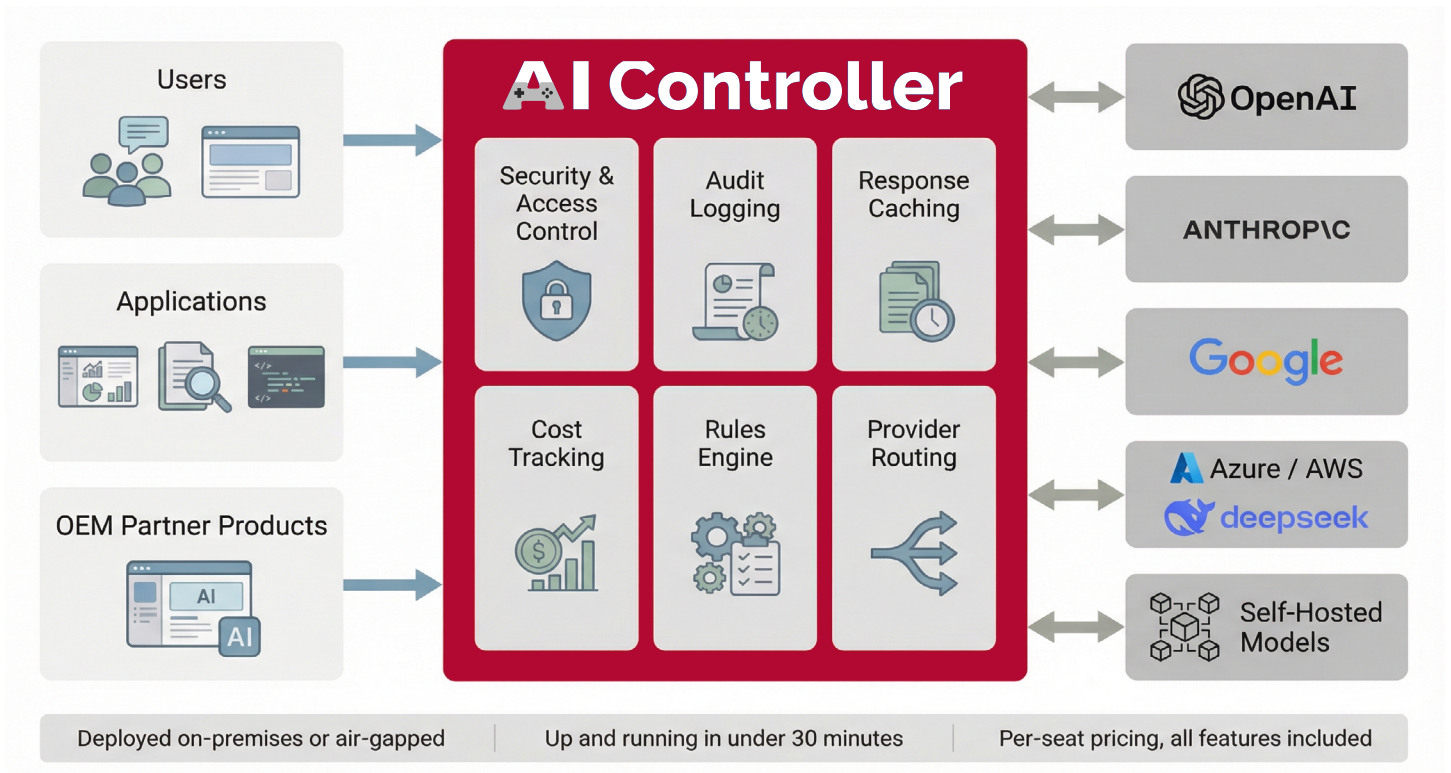

- ❖ Centralized security and API access control.
- ❖ Complete audit-ready logging.
- ❖ Switch providers instantly, no code changes.
- ❖ Full on-premises and air-gapped deployment.
- ❖ Intelligent caching to reduce API costs.

The OEM Advantage:

- ❖ Ship enterprise-grade security, logging, and compliance from day one - without building it.
- ❖ Support every major LLM provider with no vendor lock-in.
- ❖ Integrate in days, not months.
- ❖ OpenAI-compatible API means minimal development effort.
- ❖ White-label deployment keeps your brand front and centre.

Your customers want to use different LLM providers. Instead of building and maintaining integrations for each one, you embed AI Controller. Multi-provider support, security, and compliance are handled. You ship the feature in days, not quarters.

SYSTEM ARCHITECTURE

TECHNICAL SPECIFICATIONS

AI Controller supports the OpenAI, Anthropic, and Google API formats, covering the vast majority of LLM providers, with additional formats continuously being added. No code changes required.

AI Controller sits between your existing apps and the LLMs, so clients can continue working as usual, with the added benefits of speed improvements from caching and better reliability through connection pooling.

TECHNICAL OVERVIEW

Architecture

- REST API
- Horizontal scaling support
- Minimal hardware requirements

Integration

- Drop-in replacement for OpenAI API
- Bearer token & API key authentication
- Comprehensive logging API
- Swagger / OpenAPI documentation

Supported Providers

- One integration point for all major AI providers.
- OpenAI** **Anthropic** **Google**
Cohere **Azure OpenAI** **AWS Bedrock**
- GDPR-compliant European hosting
 - Self-hosted (Ollama, llama.cpp)
 - Any OpenAI-compatible endpoint

DEPLOY YOUR WAY

Most AI gateways are cloud-only. AI Controller gives you full deployment flexibility - including air-gapped environments with no internet dependency - so your infrastructure requirements dictate the architecture, not your vendor's limitations.

Every deployment option ships with the full feature set, unlimited LLM connections, and unlimited log retention. Per-seat pricing means no surprises when usage scales.

- ❖ **On-Premises** for complete data sovereignty.
- ❖ **Air-Gapped** for maximum security in isolated networks.
- ❖ **European Hosting**, through our partner, for fully private, GDPR-compliant AI operations.

Up and running in under 30 minutes. Standard deployment packages for Linux and Windows, with Docker support for containerised environments. Your data never leaves your control.

MEASURABLE BUSINESS IMPACT

Security & Compliance

- ❖ 100% API key centralisation eliminates distributed credential risks.
- ❖ Full audit logging ensures regulatory compliance.
- ❖ Role-based access control manages who uses which models.
- ❖ On-premises deployment keeps sensitive data within your boundaries.

Cost Optimisation

- ❖ Real-time usage tracking prevents budget overruns.
- ❖ Response caching reduces API costs.
- ❖ Access restrictions for high-cost models.
- ❖ Department-level cost attribution for accurate billing.

Operational Excellence

- ❖ Negligible latency overhead for maintained application performance.
- ❖ Hot-swappable providers for zero downtime during transitions.
- ❖ Unified API interface across applications.
- ❖ Instant rollout of new models to the entire organisation.

User Empowerment

- ❖ Integrated chat interface for immediate AI access.
- ❖ No technical setup for end users.
- ❖ Provider-agnostic development future-proofs AI investments.
