YEARS  
Passion. Trust. Innovation.

# QA SYSTEMS

The Software Quality Company

Engineering Certainty  
since 1996

## A Legacy of Integrity

**Trust is built over decades,  
yet it can be tested in an instant.**

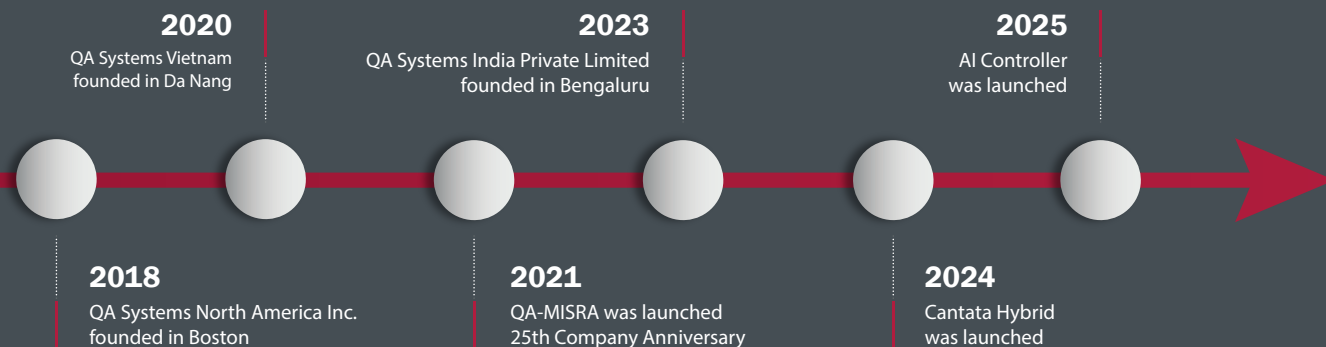

For thirty years, QA Systems has been the backbone of software verification for industries where failure is not an option.

When I founded QA Systems in 1996, we were navigating the early complexities of embedded systems and evolving standards. That experience continues to shape how we lead today, as technology enters its next era.

This long-standing commitment has earned the trust of over 350 blue-chip organisations and supported our growth through a global network of partners and resellers. Independently certified by SGS-TÜV, we help the world's most safety-critical industries navigate complex international standards with precision.

As software grows in complexity and autonomy, our focus remains unchanged. We continue to evolve our tools, expertise, and standards leadership to help engineers build systems that are safe, verifiable, and trustworthy.

*A Szczepansky*

## The Pursuit of Perfection

### Three Decades of Engineering Certainty.

We believe software should be a source of certainty, not a point of failure.

In safety-critical environments: on the road, in the air, on the rails, in hospitals, and across industrial infrastructure, software decisions carry real-world consequences. Reliability is not an aspiration; it is a requirement.

This is where QA Systems operates. At the intersection of innovation and responsibility, supporting industries where trust must be engineered, proven, and sustained.

**From certified automation to controlled AI,  
we enable innovation, guided by a single principle:  
Software Quality Comes First.**

### SGS-TÜV Certified for:

-  ISO 26262
-  EN 50716
-  IEC 62304
-  IEC 61508
-  IEC 60880

### Qualifiable for:

-  DO-178C / DO-330
- Other Standards on Request

## Innovating with Confidence

**Excellence is not accidental.**

In safety-critical software, excellence is the result of disciplined engineering and deep mastery of the science of safety.

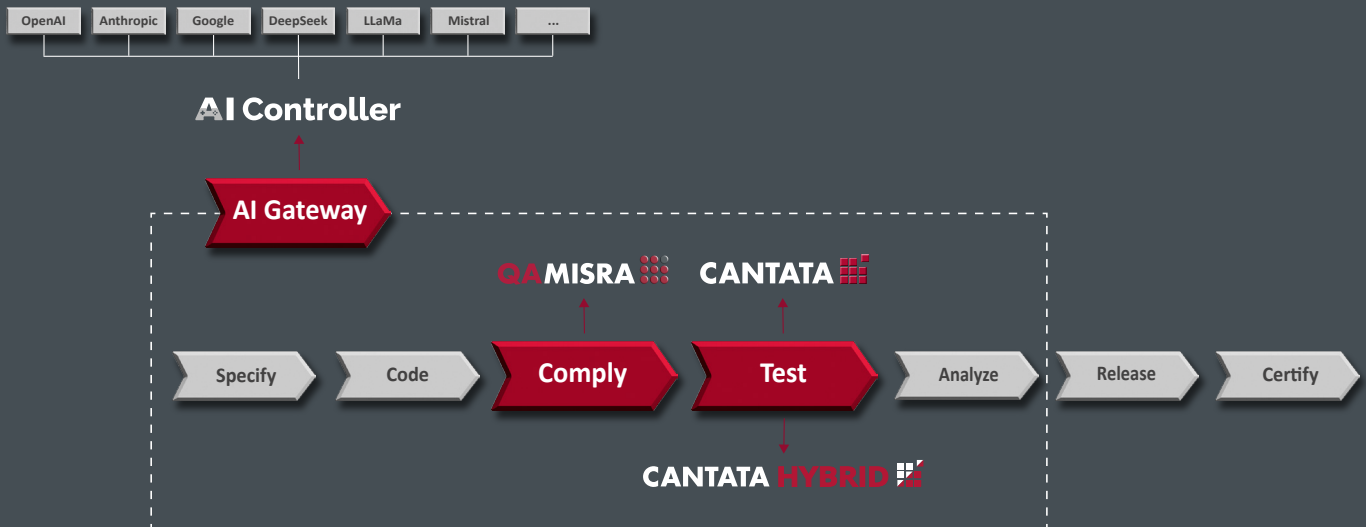

QA Systems combines decades of domain knowledge with advanced verification and automation to help engineering teams meet the world's most demanding international standards. Through rigorous analysis, independent certification, and practical tooling, we ensure compliance is not only achieved, but sustained as systems evolve.

From controlled AI integration to robust automation, we support innovation through proven, safety-focused engineering.

# Precision Tooling for Safety-Critical Excellence

Providing the foundation for verified software.

We don't just provide tools; we provide the evidence of safety. Our portfolio is the result of 30 years spent solving the hardest problems in embedded software.

## QA-MISRA

Automated C/C++  
Coding Standards Compliance

- MISRA, AUTOSAR, CERT, CWE
- Fast Static Analysis of Source Code
- Configurable Compliance Ruleset
- CI/CD Solution
- Visual Studio Code Extensions
- Flexible Permanent User Licensing

## Cantata

Automated Embedded C/C++  
Unit Testing

- AI-Assisted Test Generation
- Visual Studio Code Extensions
- Integrated Code Coverage
- CI/CD Solution
- Requirements Traceability
- Multi-Target Test Framework

## Cantata Hybrid

Safety Standards Compliance  
for GoogleTest Suites

- Certified Code Coverage up to MC/DC
- CI/CD and Parallel Test Execution
- Seamless Use of Existing &  
New GoogleTest Suites

## AI Controller

AI Governance  
Simplified and Trusted

- Control AI Cost
- Secure AI Access
- One AI Gateway

# 100M+ Lines of Code Verified Annually for Global Enterprise Clients.

The next 30 years of innovation start here.  
Let's secure your legacy.
